

**Table 1. Modal abundance of minerals and glasses in finest size fractions of selected Apollo mare soils. Maturity as Is/FeO of the <250 μm fraction [Morris, 1978] is given directly after the soil number, a value commonly used as the reference maturity for an entire soil.**

- This designation effectively includes all impact-produced glass, the majority (>90 %) of which is agglutinitic Glass; these are combined because they have similar compositions and both contain nanophase Fe<sup>0</sup>.
